Address: Arlington, Virginia

Dear Hiring Team,

I am looking for the Entry-Level Software Developer position. As a Green Card holder originally from Myanmar (Burma), I am legally authorized to work in the United States and am willing to relocate. In May 2024, I graduated from Columbia University with a Bachelor of Arts in Computer Science, and I have experience across full-stack development, frontend design, cloud integration, and technical mentorship.

Most recently, I worked at Revature, where I developed scalable applications using Java and Spring Boot, collaborated on cross-functional teams, and improved system reliability through unit testing.

My internship at SECOMM, a full-service eCommerce provider, sharpened my frontend development skills as I built responsive interfaces and integrated AWS tools for performance optimization.

As a Tech Fellow with CodePath.org, I mentored over 100 students in Data Structures and Algorithms, reinforcing both my technical knowledge and my ability to lead and support others.

In addition to my professional roles, I've completed independent projects, such as a Perfume Recommendation Engine using machine learning and a full-stack Expense Reimbursement System featuring secure authentication and API integration. These projects have deepened my understanding of user-focused design and end-to-end application development.

I'm passionate about building useful, accessible software and excited to join a team where I can continue learning, growing, and contributing to meaningful work. Whether it's improving system performance, designing intuitive interfaces, or helping others succeed, I'm ready to bring value wherever I go.

Thank you again for your time and consideration. Please feel free to reach out to me at channyeinzin.fl@gmail.com — I'd love to connect!

Warm regards,

Chan Nyein Zin (Noel)
