

Dear Hiring Team at Appian,

My name is Chan Nyein Zin, I am from Myanmar (Burma). I am Green Card holder, and I can legally work anywhere in USA. I am willing to relocate as well. I am looking for a position as a software developer. I got a Bachelor of Arts in Computer Science from Columbia University in May 2024. And I also have practical experience in software development, data analysis, and mentoring.

Last month, I completed my role as a seasonal Tech Fellow with CodePath.org, where I guided over 100 students in programming languages such as C, Java, and Python. This experience honed my ability to communicate complex technical concepts effectively and strengthened my skills in debugging and quality assurance. My guidance led to a 30% increase in successful interview outcomes among my students, reflecting my dedication to fostering a strong understanding of software development principles.

Additionally, I also gained hands-on experience as a Software Engineering Fellow at Headstarter AI. I worked with global entrepreneurs to develop full-stack applications, using Agile methodologies to meet deadlines efficiently. I contributed to various stages of the software development lifecycle, including unit testing and technical documentation. My familiarity with version control systems like Git helped me manage and track code changes effectively, ensuring seamless collaboration.

During my junior year at Columbia, I interned as a Frontend Developer at SECOMM.org. This position allowed me to improve web application performance using HTML, CSS, and JavaScript. I worked on troubleshooting complex issues and implementing solutions, which required a keen attention to detail. This experience aligns well with the responsibilities of the Associate Solution Engineer role.

I am looking forward to contributing my technical skills, analytical thinking, and collaborative spirit to assist with business analysis and quality assurance activities while gaining valuable experience in a dynamic environment. My background in programming and problem-solving, coupled with strong interpersonal skills, makes me a great fit for your team.

All the information above is correct and I am available for an interview at earliest convenience and can be reached to my channyeinzin.fl@gmail.com. I look forward to the possibility of contributing as software developer.

Warm regards,

Chan Nyein Zin
